AN INTERNATIONAL JOURNAL

# Subject Index to Volume 32, 1998

Algorithms
  high–low chain, 233
  testing trees, 189

Birkhoff–von Neumann theorem, 77
Bottleneck degree $m$ test, 207
Bounding rules, 283
Branch-and-bound algorithms, comparison, 283
Branch-and-cut algorithms
  solving Steiner tree problems, 207
  undirected Selective Traveling Salesman Problem, 263
Broadcast cycle time, 233
Broadcasting, 233
Butterfly networks, compressing, 47

Cartesian products, orientations of even cycles, 299
$p$-Centdian problem, 255
$p$-Center problem, 255
Chain graphs, two-flows, 67
Christofides' heuristic, 133
Chromatic number, disk graphs, 13
Clos network, asymmetrical multiconnection three-stage, 77
Colorings, disk graphs, 13
Computational complexity, max–min partitioning, 115
Connectivity, unidirectional hypercubes, 307
Container length, unidirectional hypercubes, 307
Cube-connected cycles, compressing, 47
Cutset Rule, 283

Diameter, incomplete WK-recursive networks, 23
Diameter-preserving orientations, torus, 1
Digraphs, Cartesian products, 299
Disk graphs, chromatic number, 13
Dynamic Nash, relationship with instantaneous user equilibria, 141
Dynamic traffic assignment, 141

Edge-coloring approach, 77
Edge fault testing, 189
Embedding, into rectilinear grid, 127
Euclidean plane, shortest two-connected Steiner networks, 133
Extended planar algorithm, maximum integral two-flow, 67

Fault-tolerant graphs, for tori, 181

GENIUS, 263
Graphs
  disk, 13
  fault-tolerant, 181
  paired-domination, 199
  solving Steiner tree problems, 207
  undirected, 1
Graph theory, 103
GREEDY, 233

Grid graphs, max-min partitioning, 115

Hamiltonian cycle, 23
Heuristics, 115
Hypercubes, unidirectional, 307

Implicit routing, 165
Instantaneous user equilibria, relationship with dynamic Nash, 141
Interval routing algorithms, 103

Large networks, 275
Local views, translation, 165

Maximum integral two-flow, extended planar algorithm, 67
Max-min partitioning, grid graphs, 115
$p$-Median problem, 255
Metric graphs, 181
Metric spaces, embedding, 127
Metropolitan Area Networks, 307
Multichip module, 189
Multiple modes, 283

Nash equilibrium, 141
Network flow model, routing, 77
$NP$-complete, 233

Optimization, max–min partitioning, grid graphs, 115
Order Swap Rule, 283
Orientations, diameter-preserving, torus, 1
Orienteering, 263

Paired-domination, graphs, 199
Parallel and distributed computation theory, 103
Planar networks, large, 275
Polynomial algorithm, $p$-centdian problem, 255
Polynomial time algorithm, 233
Processor-bound transmission, 233
Project management, 283
Project scheduling, 283
Proportional lot sizing and scheduling problem, multilevel, 85

Randomized regret-based sampling, 85
Rectilinear grid, embedding into, 127
Remote views, translation, 165
Resource-constrained project scheduling, 283
Routing
  asymmetrical multiconnection Clos network, 77
  network flow model, 77
  shortest path interval, 103

Scheduling, 233
  with multiple modes, 283
Selective Traveling Salesman Problem, undirected, 263

Sense of direction, 165
Shifting algorithm, 115
Shortest path interval labeling schemes, 103
Special-distance-test, 207
Steiner networks, shortest two-connected, on Euclidean plane, 133
Steiner tree problems, solving in graphs, 207

Terminal-distance-test, 207
Time window rules, 283
Topological properties, incomplete WK-recursive networks, 23
Torus
  diameter-preserving orientations, 1
  fault-tolerant graphs, 181
Translation, local views, 165
Tree, testing, 189

Undirected graphs, orientation, 1

Vertex and edge fault testing, 189

Wardrop's second principle, dynamic game theoretic generalization, 141
WK-recursive networks, incomplete, topological properties, 23
